

Claims

- [c1] . A locker lock comprising:
 - a tumbler dial which is engaged by a number dial;
 - a lock cylinder and a cam;
 - one or more lock tumblers; and
 - a means for engaging and disengaging the lock, wherein said means includes a locking bolt;
 - wherein said lock cylinder is off set from the cam to require greater movement of said locking bolt to engage and disengage the lock.
- [c2] The locker lock of claim 1, further comprising an indication means provided on the tumbler dial; wherein said indication means provides indication of the combination used to lock and unlock the locker lock.
- [c3] A method of changing the combination of a lock on a locker, said method comprising the step of:
 - inserting a key into a lock cylinder of the lock;
 - rotating said key;
 - rotating a number dial relative to a tumbler dial;
 - turning the key back to the locked position; and
 - wherein the locker is not opened during the process of changing the combination.

[c4] The method of claim 3, further comprising aligning the number dial with an indication means; wherein said indication means provides indication of the combination used to lock and unlock the lock.
